

NGUYEN PHAN MINH DANG

PROCESS ENGINEER

OBJECTIVE

I take pride in my achievements in the petrochemical industry, where I have developed essential skills in leadership, management, safety awareness, and problem-solving. My goal is to leverage my knowledge and experience in process engineering design after more than 2 years' experience of process operation. Through applying many documents such as P&ID, Cause and Effect, Logic Diagram, etc, I want to develop my skills to be able to create and perform designing these documents in the next 2 years. Additionally, I aim to consult and assess potential risks to enhance workplace safety.

Over the following three years, I plan to further enhance my expertise and leadership skills, gain more managerial experience, and ultimately progress to a higher-level position.

CORE COMPETENCIES

- Petrochemical Plant Operations.
- Knowledge Equipment (Pumps, Compressors, Steam Turbines).
- Root Cause Analysis (5-Why, 4M Methods).
- Safety and Risk Assessment.
- Technical Documentation (P&ID, Interlock Logic Diagram, Cause and Effect chart, SOP Development, Isometric diagram, general assembly drawing, IOM, HAZID, HAZOP, etc.).
- Aspen Hysys, AutoCAD 2D, AutoCAD 3D.
- Leadership.
- Communication and Team Collaboration.
- 7 steps of problem-solving – 7 quality control tools (White belt).
- Whole process to crack Naphtha/LPG and distillate multiple components into Ethylene, Propylene and by-products (Pyrolysis gasoline, 1,3 Butadiene,...).
- Whole process to regasify LNG to HP/LP Gas send-out.

PROFESSIONAL EXPERIENCE

CONTROL ROOM OPERATOR AT CAI MEP LNG TERMINAL

June 2025 – Present

- Pre-commissioning and commissioning for LNG Terminal and Re-gasification plant.
- Review and propose changes or improvements for the process (control loop, work aid) during pre-commissioning and commissioning phase. Develop, review, and maintain process documentation, operating procedures, and manuals.
- Control and monitor LNG tank and terminal operations, adjust parameters via DCS; identify root causes of alarms/abnormalities and implement corrective actions or guide Field Operators to restore normal conditions.
- Monitor, analyze, and evaluate machinery and equipment performance to ensure safe, stable, and efficient operations. Monitor and measure custody transfer of LNG and BOG losses. Carry out energy balances and determine loss and account for gas.
- Prepare technical reports on process performance, LOTO activities, P&ID markups, and monthly calculations for CNG/LNG truck loading bays and LNG ship exports.
- Proceed to do basic calculation: Tank Inventory, Product movement, Product loss during flaring mode, pump's NPSH_A, etc.
- Manage and optimize product loss during emergencies or flare mode operations; prepare and conduct Pre-Incident Plan (PIP) drills.
- Provide training, guidance, and technical support to operations personnel on process-related matters.
- Suggest terminal improvements and lead its implementation through the corresponding management of change process.
- Control and support Shift Supervisor in controlling working schedule, arrange working time for other colleagues, allocate OT hours of Workers and Operators. Monitor, analyze, and evaluate machinery and equipment performance to ensure safe, stable, and efficient operations.

MR. NGUYEN THANH CANH

CAI MEP LNG

OPERATION SUPERVISOR

PHONE: 0909717157

EMAIL: ntcanh@cmlngvn.com

- Be part of Emergency Response Team and attend to implement Emergency Response Plan (ERP).
- Control and monitor shipping activities as well as shipment document and related ones.
- Provide operational support for assignments and tasks delegated by the Shift Supervisor or Operations Manager.

CONTRIBUTIONS

- Propose change in LNG to ORV control loop for an optimized operation.
- Find out the reason led to LNG BOG Compressor trip without any activities.

FIELD ENGINEER AT LONG SON PETROCHEMICALS

June 2023 – June 2025

- Manage tank system conditions and perform risk assessments when receiving an assignment/product order from other departments to minimize potential issues affecting operating conditions and product movement.
- Familiar with many types of tanks (floating roof tank, dome roof tank, spherical tank, cryogenic double wall tank) and other auxiliary equipment (screw compressor, reciprocating compressor, pumps, steam turbine...)
- Review technical specifications and scope of work for contractors, ensuring their operations adhered to safety conditions.
- Work with P&IDs and isometric drawings to do line check, PSSR and clear punches before operating the system (in Pre-commissioning phase and modification job).
- Review HAZID, HAZOP, contribute to the development and review of SOPs.
- Maintain 5S standards to ensure work efficiency and utilize the 7 QC tools to analyze and identify root causes.
- Attend Focus Improvement program to contribute ideas to save company operation cost.
- Perform training sessions (P&IDs, Control Narrative, Product movement, SOPs) for the new Field Engineers.
- Supervise a team of 5 workers to do daily operations, control their working performance and allocate overtime for them.

CONTRIBUTIONS

- Propose a new method for operating the 1,3-Butadiene chilling pumps to minimize product loss.
- Implement a new sampling method for 1,3-Butadiene to reduce potential exposure to the product
- Minimize LPG loss in case of cooling down for tanks by opening highest point to release non-condensable gas.

BOARDMAN (CANDIDATE) AT LONG SON PETROCHEMICALS

Oct 2024 - Dec 2024

- Familiar with Yokogawa DCS HMI.
- Operate BOG system, transfer pumps, small steam turbine, Propylene twin-screw Compressor and FGS system.
- Prepare LOTO, perform risk assessment and review Permit to work.
- Work with C&E chart and Interlock Logic Diagram to do SIL test, function test for ESD signal and support US to review documents of the modification job.
